Missouri American Water stainless steel box

<https://www.hendrickcorp.com/architectural/products/arch-cladding/>

There are multiple manufacturers of architectural metal panel systems which could be used to hide the shiny proposed equipment box. My thought is to have architectural metal panels supported from a separate bracket on 3 sides off, and not touching the stainless steel box. The box has a 20 year warranty and getting a panel with a 10 year warranty plus may be good enough. As the panels weather and patina, the more the finish will blend into the background. Metal panels should be maintenance free once installed. Maintains the equipment in the box should also be easy as the attachment could be done with a few bolts to take off the front piece.
